

EVALUATION CRITERIA FOR EXPERIENCE ROADMAP

(Internal quality calibration — never shown to user)

1. Experience columns reflect major journey stages, not screens or features
2. All scenarios use the proprietary format exactly: "The [user] wants to [intent] because [trigger/context] by [method]"
3. Comprehensive scenario coverage — not artificially limited. Each experience has all relevant scenarios.
4. Scenarios are intent-driven, not feature descriptions
5. Variable scenario count per experience is present (some 2, some 20+)
6. Single consolidated table format — never broken into multiple tables
7. Experiences displayed as column headers regardless of count
8. If insights toggled on, insights row is present (even with empty cells)
9. No fabricated metrics or statistics in insights
10. Online sources not used when toggle is "No"
11. If persona is available, scenarios reflect persona's goals and pains (internal consistency)
12. If journey map is available, experience columns align with journey stages (internal consistency)
13. If design brief is available, scoped experiences appear as columns (internal consistency)
14. No additional commentary before or after the table
15. Secondary research used to identify comprehensive experiences and scenarios beyond the obvious
