

Evaluation Criteria — Research Note Taking

- Table structure follows required format (section headers, question rows, quote rows, additional comments rows)
- Participant names or numbered labels appear as column headers
- Every discussion guide section (or inferred section) has a matching section header row
- Every key question has a corresponding row
- No important questions skipped
- Responses capture full meaning without over-summarization
- Participant intent and natural language are preserved
- Timestamp citations included when available in source transcript
- No timestamps fabricated when absent
- Responses mapped to correct question row even if discussion order changed
- New emergent questions clearly labeled as new question
- Skipped questions remain blank (not fake filler text)
- Each section includes a quotes row with high-signal verbatim quotes
- Quotes remain raw / verbatim without rewriting
- Quotes include timestamps when available
- Aha moments highlighted correctly when required
- Inferences are rare, clearly labeled, and justified
- Participant names not repeated inside response cells when rules require generic labels
- Additional comments row captures useful uncategorized observations
- When Discussion Guide is provided, structure aligns to guide sections and questions
- When existing notes file is provided, new data appends without damaging prior content
- No fabricated data anywhere
- Cross-participant alignment maintained across same question rows
- Easy to scan and synthesis-ready
- Output is execution-ready
