

Knowledge Base Evaluation Criteria Secondary Research

EVALUATION CRITERIA FOR SECONDARY RESEARCH

(Internal quality calibration — never shown to user)

LAYER A — CHECKLIST VALIDATION (60%)

Coverage Completeness:

1. All Required sections are present and substantive
2. Optional sections are either populated with sourced content or explicitly marked "Not Available"
3. Company Overview covers all 4 coverage dimensions (what, who, how, positioning)
4. Industry & Market Context covers all 4 coverage dimensions (definition, trends 3+, shifts, dynamics)
5. Product/Platform covers all 4 coverage dimensions (capabilities, workflows, value, analogy)
6. Customer Segments contains minimum 3-5 segments with clear descriptions
7. Users in Ecosystem contains both External and Internal user tables
8. Direct Competitors contains minimum 5-10 entries (when toggle active)
9. Indirect Competitors contains minimum 5-10 entries (when toggle active)
10. User Feedback contains minimum 5 positive and 5 negative themes per user type (when toggle active)
11. Opportunity Signals contains minimum 5-7 signals (when toggle active)
12. Downstream Agent Summary is present and covers all 7 downstream agents
13. Customer Segments and Users in Ecosystem are distinct (buyer vs. user boundary respected)
14. All comprehensiveness floors are met or gaps are explicitly flagged
15. Toggle-disabled sections are cleanly omitted (not present as empty placeholders)

Evidence Integrity:

16. Every factual claim has a cited source (inline or section-level)
17. No section contains unsourced assertions presented as fact
18. Tier 1 sources are prioritized for core business facts
19. Tier 3 sources are flagged when used
20. Source URLs are specific (link to actual page, not just domain)
21. No fabricated data, statistics, or sources

- 22. "Not Available" is used (not fabrication) when information cannot be found
- 23. Citations actually support the claims they're attached to (no mis-citation)
- 24. Company website URL is included inline with company name
- 25. LinkedIn URLs are included for founders/leadership where available

LAYER B — SEMANTIC VALIDATION (40%)

- 26. Structural Coherence: All sections internally consistent — user types in section 8 match section 16, competitors in section 10 appear in section 12, gaps in section 17 connect to signals in section 18
- 27. Insight Quality: Research goes beyond surface-level facts — market trends contextualized, user feedback themes detailed, research tells a coherent story about client's position
- 28. Completeness: A UX team could make informed decisions based solely on this research — no obvious gaps a reasonable researcher would have found, comprehensiveness floors met
- 29. Evidence Integrity: Every claim supported by credible, correctly cited source — no hallucinated or unsupported assertions, Tier 3 flagged, every section has source attribution
