

EVALUATION CRITERIA FOR USER PERSONAS

(Internal quality calibration — never shown to user)

1. All persona names follow first-letter matching convention
2. Context Snapshots are 2-4 sentences, work-focused, no demographic storytelling
3. All pain points have identifiable cause (and optional impact)
4. Goals include both professional and emotional dimensions
5. Tools section represents full ecosystem — product being designed is NOT primary
6. Cross-persona structural consistency maintained (all personas same sections)
7. Conditional sections present for all personas when included for any (N/A where not applicable)
8. No stereotypes or buzzwords
9. No generic placeholders like "wants a better UX"
10. No preamble or postamble — starts with first persona, ends with last persona's final section
11. Quote section only present if user explicitly requested
12. Comprehensive detail per section (4-6 bullet points) via secondary research
13. If design brief available, user responsibilities and pains are consistent (internal traceability)
14. If ecosystem map available, user-object interactions reflected in responsibilities (internal traceability)
15. If roadmap available, persona goals/pains reflected in scenarios (internal traceability)
16. No fabricated specific metrics or research data
17. Personas feel like real people a designer could have a conversation with
