Ideas Clinic - Clinic Management

(Patient - Diabetic: Type 1 Preventive)

PERSONA 1: Diana, Diabetic Patient — Type 1 Preventive

Context Snapshot

Diana is a high school student managing Type 1 diabetes following preventive treatment. She's digitally native and comfortable with technology but relies heavily on her mother for healthcare decisions and support. She balances school, social activities, and the demands of managing a chronic condition, preferring routines that don't make her feel different from her peers.

Responsibilities & Their World

- Monitors blood sugar levels and follows prescribed treatment plans with parental oversight
- Coordinates clinic visits and medication management with her mother's help
- Balances school attendance with healthcare appointments
- Manages daily activities while being mindful of her condition
- Relies on her mother as the primary decision-maker for healthcare choices

Goals & Motivations

- Live as normal a teenage life as possible without diabetes defining her
- Maintain her health to pursue her dream of backpacking through Asia at 18
- Build independence in managing her condition over time
- Avoid hospital visits and serious complications
- Wants to stay healthy, keeping up with friends, and not being treated differently

Behaviours/Decisioning Context

- Defers major healthcare decisions to her mother, who serves as her primary influencer and decision-maker
- Seeks validation and advice from her mom before making changes to her routine or treatment
- Avoids hospitals proactively, preferring familiar clinic settings where doctors take time with patients
- Relies on trusted sources like her mom and YouTubers for diabetes management advice rather than exploring independently

Pains & Frustrations

- Finds it frustrating when medical staff don't listen or take time to answer her questions, making her feel dismissed because of her age
- Gets annoyed by long wait times at hospitals and clinics, which cuts into her limited free time
- Dislikes the fear and uncertainty that comes with needles and frequent medical procedures
- Feels overwhelmed by the constant need to monitor her condition and the restrictions it places on spontaneous activities
- Finds it difficult to balance normal teenage activities with the demands of diabetes management

Fears & Concerns

- Fear of diabetes progressing despite preventive treatment
- Concern about becoming too dependent on hospitals and losing control over her life
- Worry about the financial burden on her family from ongoing healthcare expenses
- Fear of being left out of social activities due to her condition
- Concern about complications that could prevent her from achieving her travel dreams

Tools Relied On

- Healthcare facilities such as local clinics for routine checkups and nearby hospitals for emergencies
- Pharmacies with delivery services for regular medication and supplies
- Blood glucose monitoring devices and diabetes management apps
- School health resources and support systems
- Family transportation (mother's car) for medical appointments
- Social platforms and YouTube for peer support and diabetes management advice

- Super Smash Bros and gaming platforms for recreation and social connection
-

User Personas

StayNow - Online Travel Agency

(Guest, Hotel Manager)

PERSONA 1: Grace, Guest

Context Snapshot

Grace books accommodations for both leisure and occasional work trips, primarily using her phone or laptop. She's comfortable with digital booking platforms and values transparency, convenience, and reliability. She compares options across multiple sites before making final decisions.

Responsibilities & Their World

- Searches and books accommodations for personal travel and occasional business trips
- Reviews photos, amenities, location, and guest reviews before booking
- Manages booking confirmations, modifications, and cancellations independently
- Coordinates travel plans with family or travel companions

Goals & Motivations

- Find accommodations that match her needs and budget without extensive searching
- Ensure the property matches expectations set by photos and descriptions
- Have flexibility to modify or cancel if plans change
- Success means arriving at a place that feels safe, clean, and as advertised

Pains & Frustrations

- Finds it frustrating when property photos are misleading or outdated, leading to disappointment upon arrival

- Gets annoyed by hidden fees that aren't clear until checkout, making price comparison difficult
- Dislikes unclear cancellation policies that make her hesitant to book
- Feels stressed when communication with the property is slow or unresponsive before check-in

Fears & Concerns

- Concern about safety and cleanliness of the property
- Worry about booking scams or properties that don't actually exist
- Fear of being charged incorrectly or having payment issues

Tools Relied On

- Online travel agencies such as Booking.com, Expedia, Airbnb, Hotels.com
- Review platforms like TripAdvisor, Google Reviews
- Maps and navigation apps such as Google Maps for location verification
- Payment apps such as credit cards, PayPal, Apple Pay
- Messaging apps for communication with hosts or properties

PERSONA 2: Henry, Hotel Manager

Context Snapshot

Henry manages daily operations for a boutique hotel or small property, overseeing bookings, guest services, and staff coordination. He's moderately tech-savvy and juggles multiple systems throughout the day. He works collaboratively with front desk staff and housekeeping but makes most operational decisions independently.

Responsibilities & Their World

- Manages room inventory and pricing across multiple booking channels
- Monitors reservations, cancellations, and occupancy rates
- Coordinates with housekeeping and maintenance teams to ensure room readiness
- Responds to guest inquiries, reviews, and complaints
- Makes decisions about pricing strategies, promotions, and channel distribution
- Reports performance metrics to ownership or corporate offices

Goals & Motivations

- Maximize occupancy and revenue while maintaining service quality
- Build positive guest relationships that lead to repeat bookings and strong reviews
- Streamline operations to reduce manual tasks and prevent overbooking
- Success means consistent occupancy with satisfied guests and minimal operational headaches

Pains & Frustrations

- Finds it difficult to manage inventory across multiple platforms, leading to overbooking or manual updates
- Gets frustrated by commission structures and fees from booking platforms that reduce profit margins
- Dislikes spending excessive time responding to guest inquiries across different channels
- Feels overwhelmed when trying to optimize pricing manually based on demand fluctuations

Fears & Concerns

- Fear of negative reviews damaging the property's reputation and future bookings
- Concern about overbooking situations that create guest service nightmares
- Worry about platform policy changes that could affect visibility or revenue

Tools Relied On

- Property management systems such as Opera, Cloudbeds, Mews
 - Online travel agencies such as Booking.com, Expedia, Airbnb, Hotels.com
 - Channel managers for inventory distribution like SiteMinder, RoomRaccoon
 - Messaging platforms for guest communication including email, WhatsApp
 - Spreadsheets for financial tracking and reporting
 - Review management platforms like TripAdvisor, Google Business
-

RallyUp - Online Fundraising Platform

(Organizer)

PERSONA 1: Olivia, Organizer

Context Snapshot

Olivia manages fundraising operations for a nonprofit, wearing multiple hats across campaign execution, donor relations, volunteer coordination, and tech administration. Pushed into digital-first fundraising during COVID, she's still finding her footing online — and so is her team. She thinks in terms of performance analytics and behavioral data but rarely has the tools to act on either. Chronically short-staffed, she treats automation and smart integrations not as nice-to-haves, but as the only way to keep up.

Responsibilities & Their World

- Plans and executes fundraising campaigns across formats — events, peer-to-peer drives, online auctions — while simultaneously managing the logistics behind them
- Creates and manages events end-to-end, including promotional collateral and outbound communications across email and social media
- Manages donor relationships and volunteer coordination, often without dedicated support for either
- Tracks and reconciles donations across in-person and online channels, frequently doing so manually
- Maintains the organization's tech stack and donor database, making tool decisions based on compatibility, ease of implementation, and cost-effectiveness
- Reports on campaign performance and donor engagement to leadership or board stakeholders, often assembling data from multiple disconnected sources
- Communicates with a wide range of stakeholders — donors, volunteers, leadership, vendors — across different channels and contexts

Goals & Motivations

- Deliver meaningful donor experiences that sustain long-term giving relationships, even as more of that relationship moves online
- Raise more funds while reducing the operational burden on herself and her team
- Consolidate campaign management into fewer, more capable tools that eliminate redundant work
- Protect and elevate her organization's brand — not get overshadowed by a platform's logo
- Access guidance and expertise on how to succeed online, not just a platform to operate in
- Success looks like strong donor retention, less manual effort, and campaigns that run smoothly even when she's stretched thin

Behaviours / Decisioning Context

- Evaluates tools through a practical lens: ease of onboarding, integration with existing systems, and reduction of manual touchpoints
- Seeks external validation through peer referrals, nonprofit communities, and case studies before committing to a new platform
- Relies on high-level summaries and dashboards rather than raw exports — needs insight to act on, not just numbers to compile
- Cautious about adopting new tools mid-campaign; prefers planning transitions during slower operational periods

Pains & Frustrations

- Finds it frustrating to manage different tools for different campaign types, leading to fragmented workflows and duplicated effort across her already-stretched team
- Struggles to sync in-person donations with online data, creating reconciliation work that is time-consuming and error-prone
- Gets frustrated when platforms prioritize their own branding over her organization's identity, undermining donor trust and brand consistency
- Finds data difficult to act on — it's scattered across systems and rarely surfaced in a way that meaningfully informs decisions
- Feels the weight of too much manual work with too few people, especially when it comes to onboarding teammates or ramping up for a new campaign
- Experiences the downstream impact of going digital without enough guidance — less donor connection, less engagement, and a slow decline in donations she doesn't always know how to reverse

Fears & Concerns

- Concerned that moving online has eroded the personal connection that drives donor loyalty, with no clear path to rebuilding it digitally
- Worried about making the wrong platform investment — one that's hard to migrate from or that adds complexity rather than reducing it
- Fears that team knowledge gaps and limited onboarding time will result in inconsistent campaign execution and a poor donor experience

Tools Relied On

- Fundraising and campaign platforms such as Classy, Givebutter, GiveSmart, Blackbaud
- CRM and donor management systems such as Salesforce Nonprofit, Bloomerang, Little Green Light
- Email marketing and outbound communication tools such as Mailchimp, Constant Contact, HubSpot
- Social media management tools such as Hootsuite, Buffer, Meta Business Suite
- Event management tools such as Eventbrite, Greater Giving
- Spreadsheets for manual donation tracking, reconciliation, and performance reporting
- Communication and collaboration tools such as Slack, Google Workspace, Zoom for internal and stakeholder coordination
