

GOLD STANDARD EXAMPLES: -

Ideas Clinic Workflows

User: Patient (Pam)

Scenario 1: Schedule an Appointment

Pam, a working professional, has noticed unusual fatigue and occasional chest discomfort over the last few days. She wants to find an appropriate doctor who can diagnose her condition and book an appointment at a time that fits her work schedule as soon as possible.

User Goal: To help patients identify the right doctor and schedule an appointment that works with their schedule easily.

Business Goal: To ensure appointments are booked smoothly and time slots are used effectively with fewer to no missed visits.

Workflow Variation 1 — Symptom-Led Doctor Discovery, Supporting Waitlist Booking

1.0 Homepage / Landing Screen (Appointment Booking)

↓

2.0 Symptom Entry (Find Doctors)
 ↓
 3.0 Symptom Analysis Results/Recommended Doctors (View All Doctors)

TOTAL SCREENS	15

Screen Details — Variation 1

1.0 Homepage / Landing Screen

Goal: To provide patients with easy access to appointment booking and health services.

Description:

- Patient can view featured health services and specialties available
- Patient can access emergency contact information
- Patient can view health tips and wellness content
- Patient can search for doctors by name or specialty
- Patient can sign in or register for an account
- Patient can navigate to book an appointment through symptom checker

DPs:

- HMW communicate the services available in the application without overwhelming the patient?

DOs:

- WHAT IF we personalize the homepage based on the patient's previous health concerns or booking history?

RQs:

- Do patients with active health concerns navigate directly to booking, or do they tend to research doctors and specialties first before committing to an appointment?

2.0 Symptom Entry

Goal: To capture patient symptoms accurately for appropriate doctor recommendations.

Description:

- Patient can enter symptoms using free text search with auto-suggestions
- Patient can select from common symptom categories
- Patient can indicate symptom severity and duration
- Patient can add multiple symptoms if applicable
- Patient can skip symptom entry and browse all doctors
- Patient can navigate back to homepage

DPs

- HMW help patients who don't know medical terminology to describe their symptoms accurately?
- HMW balance collecting enough symptom information for accurate recommendations without overwhelming the patient?

DOs:

- WHAT IF we use AI to ask contextual follow-up questions based on initial symptom input?

RQs:

- Do patients prefer structured symptom selection or free-form text entry?

3.0 Symptom Analysis Results/Recommended Doctors

Goal:

To present symptom analysis and recommend appropriate doctors based on patient input.

Description:

- Patient can view symptom analysis summary and severity assessment
- Patient can see recommended doctor specialties based on symptoms
- Patient can view top 3-5 recommended doctors with basic information
- Patient can check appointment slot availability for a specific doctor
- Patient can navigate to view the doctor profile for the doctors recommended
- Patient can navigate to view all doctors in the recommended specialty
- Patient can see urgency recommendations (emergency, urgent care, routine appointment)
- Patient can modify symptom input if results don't match expectations

DPs:

- HMW present symptom analysis results in a way that's informative but doesn't cause unnecessary anxiety?
- HMW help patients understand why specific doctors are recommended without medical jargon?

DOs:

- WHAT IF we show patient testimonials or success stories for the recommended doctors?

4.0 Doctor List_Filtered

Goal: To display all doctors filtered by recommended specialty with options to view availability and book appointments.

Description:

- Patient can view list of doctors filtered by specialty based on symptom analysis
- Patient can see doctor details including name, qualifications, experience, and ratings
- Patient can filter doctors by location, availability, consultation mode, language, and gender
- Patient can sort doctors by rating, experience, earliest availability, or consultation fee
- Patient can view next available appointment slot for each doctor
- Patient can navigate to check full appointment slot availability for a doctor
- Patient can view detailed doctor profile
- Patient can search for specific doctors by name

DPs:

- HMW show huge sets of data in a consumable format?
- HMW help patients make informed doctor selection decisions when multiple qualified options are available?

DOs:

- WHAT IF we highlight doctors who have successfully treated similar symptoms in the past?

RQs:

- What are the top factors patients use to choose between multiple doctors (availability, ratings, experience, proximity)?

Pu.1 Appointment Slot Availability/Selection

Goal: To display available appointment slots and enable patients to select a suitable time.

Description:

- Patient can view doctor details including name, specialty, and consultation mode
- Patient can see available appointment slots for the next 7-14 days
- Patient can view slot status (confirmed available, limited slots, waitlist available)
- Patient can filter slots by date, time of day (morning/afternoon/evening), and consultation mode
- Patient can select a specific time slot to book
- Patient can join waitlist if no suitable confirmed slots are available

- Patient can view consultation duration and fees for each slot
- Patient can navigate back to doctor list or doctor profile

DP:

- HMW display availability in a way that helps patients quickly find slots that fit their work schedule?
- HMW communicate waitlist options without discouraging patients from booking?

DO:

- WHAT IF we integrate with the patient's calendar to highlight slots that don't conflict with their schedule?

RQs:

- How often do users fail to find a suitable slot and abandon? How acceptantant/reluctant is the waitlist concept?

Pu.2 Doctor Profile Screen

Goal: To provide comprehensive information about the doctor to help patients make informed decisions.

Description:

- Patient can view doctor's complete profile including photo, name, and qualifications
- Patient can see specializations, areas of expertise, and years of experience
- Patient can read doctor's bio and professional background
- Patient can view patient ratings, reviews, and testimonials
- Patient can see consultation modes offered (in-person/virtual), languages spoken, and clinic locations
- Patient can view consultation fees and insurance accepted
- Patient can navigate to check appointment availability
- Patient can navigate back to doctor list or search results

DPS:

- HMW present doctor credentials and experience in a way that builds trust without being overwhelming?

DOs:

- WHAT IF we show video introductions from doctors to create a more personal connection?

RQs:

- What specific information builds enough trust for users to proceed with booking?
- How much do patient reviews influence appointment booking decisions for urgent vs. routine visits?
- Do first-time patients place more or less weight on credentials vs. patient reviews when selecting a doctor?

Pu.3 Confirm Waitlist Booking

Goal: To allow patients to join a waitlist when preferred slots are unavailable.

Description:

- Patient can view doctor details and waitlist information
- Patient can specify preferred date range and time preferences for waitlist
- Patient can see estimated wait time or position in queue
- Patient can select notification preferences (SMS/email) for slot availability
- Patient can view waitlist terms and conditions
- Patient can confirm joining the waitlist
- Patient can navigate back to view other doctors or time slots

DPs:

- HMW set appropriate expectations for waitlist timeline without discouraging patients?

DOs:

- WHAT IF we suggest alternative doctors with immediate availability as a backup option?

Pu.4 Sign-In

Goal: To authenticate patients before proceeding with appointment booking.

Description:

- Patient can enter phone number or email address
- Patient can request OTP to be sent via SMS or email
- Patient can view privacy policy and terms of service
- Patient can navigate back to previous screen
- Patient can access help or support for sign-in issues

DPs:

- HMW make the sign-in process quick and seamless when patients are eager to complete their booking?

Pu.5 OTP Verification

Goal: To verify patient identity through a one-time password.

Description:

- Patient can enter the OTP received via SMS or email
- Patient can see countdown timer for OTP validity
- Patient can request to resend OTP if not received or expired
- Patient can verify OTP and proceed to booking
- Patient can change phone number or email if entered incorrectly
- Patient can access help for OTP verification issues

DPs:

- HMW handle OTP delivery delays without frustrating patients or causing booking abandonment?

Er.1 OTP Error

Goal: To handle OTP verification failures and guide patients to resolution.

Description:

- Patient can view error message explaining why OTP verification failed
- Patient can see remaining verification attempts
- Patient can request to resend OTP
- Patient can change delivery method (SMS to email or vice versa)
- Patient can contact support for assistance
- Patient can navigate back to sign-in screen

5.0 Appointment Booking Information

Goal: To collect necessary patient information for appointment confirmation.

Description:

- Patient can view selected appointment details (doctor, date, time, mode)
- Patient can enter or confirm patient name, age, and gender
- Patient can provide reason for visit or chief complaint
- Patient can add medical history or special notes if applicable
- Patient can book for self or add dependent details
- Patient can view consultation fee and payment terms
- Patient can select reminder preferences
- Patient can confirm booking information and proceed

DPs:

- HMW balance required patient information vs speed of booking without increasing drop-off?

DOs:

- WHAT IF we pre-populate information from previous appointments or medical records?

Pu.6 Waitlist Booking Confirmation

Goal: To confirm successful waitlist registration and set expectations.

Description:

- Patient can view waitlist confirmation message
- Patient can see waitlist reference number
- Patient can view doctor details and preferred time preferences
- Patient can see estimated wait time or queue position
- Patient can review notification settings for slot availability updates
- Patient can navigate to homepage or view all appointments
- Patient can download or share waitlist confirmation

Pu.7 Booking Confirmation

Goal: To confirm successful appointment booking and provide all necessary details.

Description:

- Patient can view booking confirmation message with appointment ID
- Patient can see complete appointment details (doctor, date, time, location, mode)
- Patient can view preparation instructions and what to bring
- Patient can see directions to clinic or virtual meeting link
- Patient can view payment status and consultation fee
- Patient can add appointment to personal calendar
- Patient can share or print appointment details
- Patient can view tips on questions to ask the doctor during consultation
- Patient can see benefits of arriving on time for the appointment
- Patient can navigate to homepage or view all appointments

DPs:

- HMW ensure patients have all necessary information to successfully attend their appointment?

DOs:

- WHAT IF we send personalized pre-appointment health tips based on the consultation reason?

Em.1 Booking Confirmation Email

Goal: To provide email confirmation with appointment details for patient records.

Description:

- Patient receives email with appointment confirmation and booking ID
- Patient can view all appointment details in email format
- Patient can add appointment to calendar via email link
- Patient can access clinic directions or virtual meeting link
- Patient can view contact information for queries or changes

Em.2 Waitlist Booking Email

Goal: To confirm waitlist registration via email and provide reference information.

Description:

- Patient receives email confirming waitlist registration
- Patient can view waitlist reference number and doctor details
- Patient can see notification that they'll be alerted when slots become available
- Patient can access link to manage or cancel waitlist registration

TOTAL SCREENS	11

Screen Details — Variation 2 (Only screen newly added)

Pu.8 Requirement/Preference Information

Goal: To capture patient preferences for personalized doctor recommendations.

Description:

- Patient can select preferred specialty or medical concern
- Patient can specify preferred days and time windows for appointments
- Patient can choose consultation mode preference (in-person/virtual)
- Patient can select location or distance preferences
- Patient can specify language preference for doctor
- Patient can indicate gender preference for doctor
- Patient can skip this step to view all doctors
- Patient can proceed to find doctors based on preferences

DPs:

- HMW collect preferences without making patients feel they need to complete every field?

DOs:

- WHAT IF we remember patient preferences for future bookings to streamline the process?

RQs:

- Which preferences matter most to patients when selecting doctors?

4.1 Doctor List_All

Goal: To be able to access all doctor profiles by allowing to find the right doctor easily.

Description:

- Patient can view all available doctors across specialties
- Patient can see doctor details including name, specialty, qualifications, and ratings
- Patient can filter doctors by specialty, location, availability, mode, language, and gender
- Patient can sort doctors by various criteria
- Patient can search for specific doctors by name
- Patient can select a time slot and book with a doctor
- Patient can view doctor profiles

DPs:

- HMW help patients navigate a large doctor directory without feeling overwhelmed?

6.0 Appointment Booking_Patient Information

Goal: To effectively collect patient details required for appointment booking.

Description:

- Patient can view selected appointment summary (doctor, date, time)

- Patient can provide details such as full name, date of birth, and gender
- Patient can provide contact information (phone, email, address)
- Patient can select whether booking for self or dependent
- Patient can add emergency contact details
- Patient can provide insurance information if applicable
- Patient can specify reason for visit
- Patient can add relevant medical history notes
- Patient can proceed to payment information

DPs:

- HMW minimize data entry while collecting all necessary information for the appointment?

7.0 Appointment Booking_Payment Information

Goal: To securely collect payment information for appointment booking.

Description:

- Patient can view appointment cost breakdown including consultation fee and taxes
- Patient can see payment policy (no charge unless last-minute cancellation)
- Patient can view cancellation policy and refund timeline
- Patient can enter credit card information for hold (not charged immediately)
- Patient can select to save payment method for future use
- Patient can view secure payment indicator and privacy assurance
- Patient can review complete booking summary before confirming
- Patient can confirm booking and proceed

DPs:

- HMW communicate the payment hold policy clearly to avoid confusion about charges?
- HMW build trust in payment security during a potentially sensitive transaction?
- HMW handle payment commitment (card hold vs upfront charge) without reducing booking intent?

ROs:

- Does requiring payment or card details reduce booking conversion rates? If yes, What is the level of impact?

1.1 Homepage / Landing Screen_Signed In

Goal: To provide signed-in patients with personalized access to their appointments and services.

Description:

- Patient can view upcoming appointments summary on homepage
- Patient can see quick actions for upcoming appointments (view details, reschedule, cancel)
- Patient can navigate to full appointments dashboard
- Patient can access personalized health recommendations
- Patient can view medical records and test results
- Patient can book new appointments
- Patient can access account settings and profile

DP: HMW surface upcoming appointments prominently without cluttering the homepage for patients who use the app frequently?

DO: WHAT IF we show context-aware prompts for patients who have appointments within 24-48 hours?

Scenario 2: Modify an Appointment

Pam scheduled an appointment for next Tuesday at 10 AM, but her work meeting has been rescheduled to the same time. She wants to modify her appointment to a different time slot or day that works better with her updated schedule efficiently.

User Goal: To quickly access an existing appointment and reschedule it to a more convenient time.

Business Goal: To minimize cancellations and improve appointment adherence through seamless rescheduling.

Workflow Variation 1 — Traditional Reservation Management

```
1.1 Homepage / Landing Screen_Signed In (View Appointments)

TOTAL SCREENS	10

Screen Details — Variation 1 (for only screens not covered above)

8.0 My Appointments Dashboard

Goal: To provide comprehensive view and management of all patient appointments.

Description:

- Patient can view list of all appointments (upcoming, past, cancelled)
- Patient can see appointment details including date, time, doctor, specialty, and status
- Patient can filter appointments by status (upcoming/past/cancelled/waitlist)
- Patient can sort appointments by date or doctor
- Patient can search for specific appointments
- Patient can select an appointment to view full details
- Patient can access quick actions (reschedule, cancel, view details) for each appointment
- Patient can book a new appointment

DPs:

- HMW organize appointments dashboard so patients can quickly find the appointment they want to modify?

DOs:

- WHAT IF we group appointments by doctor or by health condition for patients with multiple chronic conditions?

9.0 Appointment Details_Upcoming

Goal: To display complete appointment information and enable management actions.

Description:

- Patient can view complete appointment details (doctor, specialty, date, time, location, mode)
- Patient can see appointment confirmation number and status
- Patient can view reason for visit and notes
- Patient can see preparation instructions and what to bring
- Patient can access directions to clinic or virtual meeting link

- Patient can view doctor profile
- Patient can reschedule the appointment
- Patient can cancel the appointment
- Patient can add appointment to calendar
- Patient can share or print appointment details
- Patient can contact clinic for queries

DPs:

- HMW make the reschedule option easily accessible without encouraging unnecessary appointment changes?

DOs:

- WHAT IF we proactively highlight time-sensitive actions (e.g., “Reschedule before X time to avoid fee”)?

RQs:

- At what point before the appointment do users typically decide to reschedule or cancel?

Pu.10 Confirm Reschedule

Goal: To review and confirm appointment reschedule before finalizing.

Description:

- Patient can view side-by-side comparison of original and new appointment details
- Patient can see what has changed (date, time, or both)
- Patient can review doctor and appointment mode remain the same
- Patient can see notification that original appointment will be cancelled
- Patient can view reschedule policy and any applicable terms
- Patient can confirm the reschedule
- Patient can go back to select a different time
- Patient can cancel the reschedule process

DPs:

- HMW clearly communicate what's changing without creating confusion about which appointment is active?

Pu.11 Booking Confirmation_Rescheduled

Goal: To confirm successful rescheduling and provide updated appointment information.

Description:

- Patient can view reschedule confirmation message
- Patient can see updated appointment details (new date, new time)
- Patient can view appointment confirmation number
- Patient can see notification that email confirmation has been sent
- Patient can add updated appointment to calendar
- Patient can view preparation instructions for new appointment time
- Patient can navigate to appointment details
- Patient can navigate to appointments dashboard
- Patient can navigate to homepage

Pu.9 Waitlist Booking Confirmation_Rescheduled

Goal: To confirm waitlist registration when rescheduling and no suitable slots are available.

Description:

- Patient can view waitlist confirmation for rescheduled appointment
- Patient can see original appointment has been cancelled
- Patient can view waitlist details and preferences
- Patient can see notification settings for slot availability
- Patient can navigate to appointments dashboard

Em.3 Waitlist Booking Confirmation_Rescheduled Email

Goal: To provide email confirmation of waitlist registration after reschedule attempt.

Description:

- Patient receives email confirming waitlist registration
- Patient can view notification that original appointment was cancelled
- Patient can see waitlist preferences and reference number

Em.4 Booking Confirmation_Rescheduled Email

Goal: To provide email confirmation of successful appointment reschedule.

Description:

- Patient receives email with reschedule confirmation
- Patient can view updated appointment details
- Patient can add appointment to calendar via email link
- Patient can access directions or virtual meeting link

Workflow Variation 2 — Calendar Conflict Detection → One-Click Reschedule

Em.5 Conflict Alert Email (Modify Appointment)

Screen Details — Variation 2 (for only screens not covered above)

Em.5 Conflict Alert Email

Goal: To proactively alert patients about calendar conflicts with their appointments.

Description:

- Patient receives email notification about detected calendar conflict (this email is triggered a new invite is scheduled on the calendar at the same time of the doctor appointment)
- Patient can view conflicting appointment details
- Patient can see conflicting calendar event information
- Patient can click direct link to reschedule doctor appointment
- Patient can dismiss alert if conflict is not an issue
- Patient can view suggested alternative time slots in email

DPs:

- HMW detect calendar conflicts accurately without causing false alarm notifications?

DOs:

- WHAT IF we allow one-click rescheduling directly from the email without opening the app?

RQs:

- How early before the appointment should conflict alerts be sent?
-

Scenario 3: Cancel an Appointment

Pam booked an appointment for a routine checkup, but her symptoms have completely resolved, and she no longer feels the need to visit the doctor. She wants to cancel her upcoming appointment quickly to free up the slot for other patients.

User Goal: To quickly cancel an upcoming appointment with minimal effort.

Business Goal: To free up unused slots, reduce no-shows, and enable timely reallocation to other patients.

Workflow Variation 1 — Traditional Reservation Management With Flexible Cancellation

```
1.1 Homepage / Landing Screen_Signed In (View Appointments)

Screen Details — Variation 1 (only screen not covered above)

Pu.12 Cancel Appointment Confirmation

Goal: To allow patients to review cancellation policy and confirm appointment cancellation.

Description:

- Patient can view appointment details being cancelled
- Patient can see cancellation policy including cancellation window deadline
- Patient can view whether cancellation is within or outside cancellation window
- Patient can see refund information (whether refund applies, amount, timeline)
- Patient can view any cancellation fees if outside cancellation window
- Patient can provide optional reason for cancellation
- Patient can confirm cancellation
- Patient can go back without cancelling
- Patient can choose to reschedule instead of cancel

DPs:

- HMW communicate cancellation policy clearly without creating friction for legitimate cancellations?

DOs:

- WHAT IF we offer to reschedule instead of cancel if the patient indicates symptoms haven't fully resolved?

RQs:

- How sensitive are users to cancellation fees vs convenience of cancelling?

Pu.13 Cancellation Confirmation Screen

Goal: To confirm successful appointment cancellation and provide relevant information.

Description:

- Patient can view cancellation confirmation message
- Patient can see cancelled appointment details
- Patient can view cancellation reference number
- Patient can see refund amount and processing timeline if applicable
- Patient can view confirmation email sent notification
- Patient can book a new appointment if needed
- Patient can navigate to appointments dashboard
- Patient can navigate to homepage

9.1 Appointment Details_Cancelled

Goal: To display cancelled appointment details for patient reference.

Description:

- Patient can view appointment details with cancelled status
- Patient can see cancellation date and time
- Patient can view refund status and amount if applicable
- Patient can see cancellation reference number
- Patient can book a new appointment with the same doctor
- Patient can navigate back to appointments dashboard

Em.6 Cancellation Confirmation Email

Goal: To provide email confirmation of appointment cancellation.

Description:

- Patient receives email confirming appointment cancellation
- Patient can view cancelled appointment details
- Patient can see refund information and timeline if applicable
- Patient can access link to book new appointment if needed

Workflow Variation 2 — Quick Access & Policy-Driven Cancellation

StayNow - Workflows

User: Boutique Guest (Bella)

Scenario 1: Collaborative Group Trip Planning

Bella is planning a staycation to Monterey, California along with her friends for the next month. She explores various hotels to stay in Monterey using the platform and shortlists a few and adds them to a wishlist. She then invites her friends to the wishlist, collaborates with them via chat to get to group consensus and finalize a stay that best matches everyone's preferences.

User Goal: To easily discover and organize potential stays, share them with friends, and collaboratively decide on the best option through seamless group interaction and consensus-building tools.

Business Goal: To increase user engagement and booking conversion by enabling collaborative trip planning, reducing decision friction through social validation, and creating viral growth through friend invitations.

Workflow: Variation 1 — Browse-First, Then Invite Friends to Wishlist

```

Screen Details — Variation 1

1.0 Homepage / Landing Screen

Goal: To welcome guests and provide easy access to accommodation search and platform features.

Description:

- Guest can view featured destinations and popular stays
- Guest can browse trending travel content and recommendations
- Guest can access quick search for destinations
- Guest can sign in to access personalized features
- Guest can create a new account
- Guest can explore without signing in with limited features

DPs:

- HMW encourage sign-in for wishlist features without creating barriers for browsing and exploration?

DOs:

- WHAT IF we showcase social proof of group trips planned on the platform to inspire collaborative planning?

Pu.1 Sign-In

Goal: To authenticate guests quickly and securely for personalized platform access.

Description:

- Guest can enter phone number or email address
- Guest can request OTP to be sent via SMS or email
- Guest can view privacy policy and terms of service
- Guest can navigate back to homepage
- Guest can switch between sign in and sign up options

DPs:

- HMW make sign-in fast enough that it doesn't disrupt the trip planning momentum?

Pu.2 OTP Verification

Goal: To verify guest identity through one-time password authentication.

Description:

- Guest can enter the OTP received via SMS or email
- Guest can see OTP validity duration
- Guest can request to resend OTP if not received or expired
- Guest can verify OTP and proceed to signed-in experience
- Guest can change phone number or email if entered incorrectly

DPs:

- HMW handle OTP delivery delays without causing frustration or abandonment?

Er.1 OTP Error Screen

Goal: To handle OTP verification failures and guide guests to resolution.

Description:

- Guest can view error message explaining why verification failed
- Guest can see remaining verification attempts
- Guest can request to resend OTP
- Guest can change delivery method (SMS to email or vice versa)
- Guest can contact support for assistance
- Guest can navigate back to sign-in screen

1.1 Homepage / Landing Screen_Signed In

Goal: To provide signed-in guests with personalized access to trip planning and booking features.

Description:

- Guest can view personalized destination recommendations based on preferences
- Guest can access saved wishlists and ongoing trip plans
- Guest can see upcoming bookings and reservations
- Guest can search for stays by destination, dates, and guest count
- Guest can view notifications about wishlist updates and friend activities
- Guest can access account settings and profile
- Guest can browse featured group travel experiences

DPs:

- HMW surface active wishlists and friend invitations prominently without cluttering the homepage?

DOs:

- WHAT IF we show real-time updates of friends' trip planning activities to create social engagement?

2.0 Search Results

Goal: To display relevant accommodation options matching search criteria with easy wishlist organization.

Description:

- Guest can view list of stays matching search criteria with photos and key details
- Guest can see pricing, ratings, location, and amenities for each stay
- Guest can filter results by price range, property type, amenities, and guest ratings
- Guest can sort results by price, rating, popularity, or distance
- Guest can add stays directly to wishlist from search results
- Guest can view detailed stay information by selecting a property
- Guest can view map showing stay locations
- Guest can modify search criteria to refine results

DPs:

- HMW make adding to wishlist effortless so guests can quickly build a collection of options?
- HMW display enough information for preliminary filtering without overwhelming the search results view?

DOs:

- WHAT IF we show which stays are popular among groups or have been wishlisted by friends?

RQs:

- What are all the factors (such as location, budget, etc) that guests keep in mind when exploring stays?

3.0 Stay Detail

Goal: To provide comprehensive stay information for informed decision-making and wishlist addition.

Description:

- Guest can view complete property details including photos, description, and features
- Guest can see room types, pricing breakdown, and availability calendar
- Guest can view amenities, house rules, and cancellation policy
- Guest can read guest reviews and ratings
- Guest can view location details and nearby attractions
- Guest can see host information and response rate
- Guest can add stay to wishlist
- Guest can share stay details with friends
- Guest can navigate back to search results

DPs:

- HMW organize extensive stay information so it's easy to scan and compare mentally with other options?

RQs:

- What information do guests prioritize when evaluating stays for group trips versus solo travel?

Pu.3 Select Existing / Create New Wishlist

Goal: To allow guests to organize stays into existing wishlists or create new ones.

Description:

- Guest can view list of existing wishlists
- Guest can see wishlist names, destination, and number of stays in each
- Guest can select existing wishlist to add the stay
- Guest can create a new wishlist
- Guest can see whether wishlists are private or shared
- Guest can cancel and return to previous screen

DPs:

- HMW make wishlist organization intuitive when guests may have multiple ongoing trip plans?

Pu.4 Create New Wishlist

Goal: To set up a new wishlist with relevant trip details for organizing potential stays.

Description:

- Guest can enter wishlist name
- Guest can specify destination for the trip
- Guest can add tentative travel dates
- Guest can indicate number of travelers
- Guest can add trip notes or preferences
- Guest can choose privacy setting (private or shared)
- Guest can create the wishlist
- Guest can cancel and return to previous screen

DPs:

- HMW collect helpful trip context without making wishlist creation feel like a lengthy form?

DOs:

- WHAT IF we auto-suggest wishlist names based on destination and dates?

4.1 Wishlist (Private)_Stays

Goal: To manage privately saved stays for travel planning & enable transition to collaborative group planning.

Description:

- Guest can view all stays saved in the wishlist with photos and key details
- Guest can see wishlist name, destination, dates, and traveler count
- Guest can add more stays to the wishlist
- Guest can remove stays from the wishlist
- Guest can view detailed information for each stay

- Guest can compare stays within the wishlist
- Guest can invite friends to collaborate on the wishlist
- Guest can edit wishlist details

DPs:

- HMW encourage guests to invite friends at the right moment in their planning process?

DOs:

- WHAT IF we suggest inviting friends when wishlist reaches 3-5 stays?

Pu.5 Invite Friends Pop-Up

Goal: To enable guests to invite friends to collaborate on trip planning through multiple channels.

Description:

- Guest can view wishlist details being shared
- Guest can enter email addresses of friends to invite
- Guest can select contacts from phone or email
- Guest can generate shareable link to wishlist
- Guest can copy link to share via messaging apps or social media
- Guest can add personalized invitation message
- Guest can send invitations
- Guest can cancel and return to wishlist

DPs:

- HMW make inviting friends feel natural and not spammy or overly promotional?

DOs:

- WHAT IF we provide suggested invitation messages based on the trip type and relationship?

4.0 Wishlist (Shared)_Stays

Goal: To enable collaborative stay selection for trip planning.

Description:

- Guest can view all stays in the shared wishlist with group member reactions
- Guest can see which friends have viewed, liked, or commented on each stay
- Guest can add reaction emojis to indicate interest level on stays
- Guest can view activity feed showing recent group actions
- Guest can see list of invited members and their participation status
- Guest can add new stays to the shared wishlist
- Guest can remove stays (with group member visibility)
- Guest can access group chat for discussions
- Guest can create polls to gather preferences
- Guest can view stay details

DPs:

- HMW help groups reach consensus efficiently when members have different preferences?
- HMW surface which stays have strongest group support without requiring formal voting?

DOs:

- WHAT IF we use AI to identify stays that best match the collective group preferences?

RQs:

- Do groups prefer passive feedback (reactions) or active discussion (chat/polls) for deciding on stays?

5.0 Wishlist (Shared)_Polls

Goal: To facilitate quick decision-making through polls related to trip planning (trip preferences, stay options).

Description:

- Guest can view all active and completed polls
- Guest can see poll questions, options, and voting results
- Guest can create new polls with custom questions
- Guest can add poll options (stays, dates, budgets, amenities)
- Guest can vote on active polls
- Guest can see who voted for which options
- Guest can set poll deadlines
- Guest can close or delete polls they created
- Guest can navigate to stays or chats tabs

DPs:

- HMW make polls feel lightweight and fun rather than formal?

DOs:

- WHAT IF we auto-generate polls based on common decision points (dates, budget, amenities)?

6.0 Wishlist (Shared)_Chats

Goal: To enable real-time group discussion for trip planning and consensus building.

Description:

- Guest can view conversation history with all group members
- Guest can send text messages to the group
- Guest can share stays from wishlist directly in chat
- Guest can react to messages with emojis
- Guest can view when members are typing
- Guest can see read receipts for messages
- Guest can mention specific members using @ tags
- Guest can share photos and links
- Guest can navigate to stays or polls tabs

DPS:

- HMW keep chat focused on trip planning without becoming general social messaging?

DOs:

- WHAT IF we provide conversation starters or prompts to guide productive planning discussions?

Workflow: Variation 2 — AI Trip Planner Builds the Wishlist Through Conversation

```
1.0  Homepage / Landing Screen  (Sign In)
↓
Pu.1  Sign-In  (Send OTP)
↓
Pu.2  OTP Verification Pop-Up  (Verify)
↓  ↘ {if OTP fails}  Er.1  OTP Error State  (Resend OTP) → Pu.2
1.1  Homepage / Landing Screen – Signed In  (Plan a Trip with AI)
↓
7.0  AI Trip Planner – Initial State (View Stay Details)
      (AI seeks some info related to trip such as destination, group size →
      vibe, budget, preferences and suggests stays)
↓
3.0  Stay Detail (Close/Exist)
↓
7.0  AI Trip Planner – Initial State (Informs AI of Interest)//reviews multiple
      suggested stays, informs AI their interests in AI Trip Planner. Parallely
      prepares ready to create wishlist based on the info from user on interested
      stays
↓
7.1  AI Trip Planner (Reviews & Initiates Wishlist Creation)
↓
Pu.4  Create New Wishlist (Create) //Details like destination, date, etc
      mostly prefilling as previously collected)
↓
8.0  Wishlist (Private) – AI enabled – Stays (Invite Friends)
↓
Pu.5  Invite Friends Pop-Up  (Send via email / link)
↓  //invite gets sent & friends join asynchronously, friends contribute by
      adding to wishlist later; members in the wishlist interact with AI express
```

their interests to stay through reactions, carry discussions via chats, polls to discuss preferences to reach consensus

9.0 Wishlist (Shared) - AI enabled _Stays (Chats)//group can interact with AI to help find more better stays that match preferences, remove, etc and updates the wishlist

↓ ↘ (Polls) → 10.0 Wishlist (Shared)- AI enabled_Polls

Emails / Notifications	0
TOTAL SCREENS	14

Screen Details — Variation 2 (only covering screen not covered in variation 1)

7.0 AI Trip Planner - Initial State

Goal: To gather trip preferences through conversational AI and suggest personalized stays.

Description:

- Guest can engage in conversational interface with AI trip assistant
- Guest can provide destination preferences through text or voice
- Guest can specify group size and traveler types
- Guest can describe trip vibe and preferences (relaxing, adventurous, cultural)
- Guest can indicate budget range
- Guest can share must-have amenities or features
- Guest can view AI-suggested stays based on conversation
- Guest can click on suggested stays to view detailed information
- Guest can ask follow-up questions about suggestions
- Guest can skip AI planning and browse manually

DPs:

- HMW make AI conversation feel natural and helpful without being intrusive or overwhelming?
- HMW balance gathering enough information for good recommendations with keeping the interaction brief?

DOs:

- WHAT IF the AI learns from the group's past trips to provide better initial suggestions?

RQs:

- At what point do guests prefer AI suggestions versus manual search and exploration?

7.1 AI Trip Planner

Goal: To allow guests to express interest in AI-suggested stays and prepare wishlist creation.

Description:

- Guest can view multiple AI-suggested stays with key details
- Guest can indicate interest level for each suggested stay (interested, maybe, not interested)
- Guest can view conversation summary showing preferences discussed
- Guest can see AI preparing draft wishlist with interested stays
- Guest can request more suggestions matching criteria
- Guest can refine preferences through additional conversation
- Guest can review and initiate wishlist creation with selected stays
- Guest can view detailed stay information

DPs:

- HMW make the transition from AI suggestions to wishlist creation seamless and obvious?

DOs:

- WHAT IF AI proactively suggests when it has enough information to create a good wishlist?

8.0 Wishlist (Private) - AI Enabled_Stays

Goal: To display AI-curated private wishlist with ongoing AI assistance capabilities.

Description:

- Guest can view stays added through AI conversation with photos and details
- Guest can see wishlist details pre-filled from AI conversation (destination, dates, group size)
- Guest can access AI assistant for additional stay recommendations
- Guest can ask AI to refine wishlist based on new criteria
- Guest can manually add or remove stays
- Guest can view AI insights about each stay (why it was recommended)
- Guest can invite friends to collaborate
- Guest can view detailed stay information

DPs:

- HMW maintain AI assistance value after initial wishlist creation without being intrusive?

RQs:

- Do users rely more on memory, shortlist, or repeated search when evaluating options?

9.0 Wishlist (Shared) - AI Enabled_Stays

Goal: To enable collaborative planning with AI assistance for finding stays matching group preferences.

Description:

- Guest can view all stays with group member reactions and AI recommendations
- Guest can see which stays have strongest group consensus
- Guest can interact with AI to find stays matching collective preferences
- Guest can ask AI to analyze group reactions and suggest best matches
- Guest can request AI to add or remove stays based on group feedback
- Guest can add reactions to stays to indicate preferences

- Guest can view activity feed showing group and AI actions
- Guest can access group chat
- Guest can create polls

DPs:

- HMW use AI to accelerate group consensus without overriding individual member preferences?
- HMW balance equal participation vs decision ownership in group booking?

DOs:

- WHAT IF AI mediates conflicting preferences by finding compromise options?

RQs:

- Do groups trust AI recommendations for group decisions or prefer reaching consensus organically?

10.0 Wishlist (Shared) - AI Enabled_Polls

Goal: To facilitate structured group decision-making with AI-assisted poll creation and analysis.

Description:

- Guest can view all active and completed polls
- Guest can see poll results and voting patterns
- Guest can request AI to generate polls based on group discussions
- Guest can create manual polls with custom questions
- Guest can vote on active polls
- Guest can view AI insights from poll results
- Guest can ask AI to suggest stays based on poll outcomes
- Guest can navigate to stays or chats tabs

DPs:

- HMW leverage AI to create relevant polls without making the process feel automated or impersonal?
- How do groups typically resolve conflicts in preferences when selecting stays?

11.0 Wishlist (Shared) - AI Enabled_Chats

Goal: To enable group discussion with AI assistant that can answer questions and provide recommendations.

Description:

- Guest can view conversation history with group members and AI
- Guest can send messages to the group
- Guest can mention AI assistant to ask questions about stays or get recommendations
- Guest can see AI responses with stay suggestions and helpful information
- Guest can share stays from wishlist in chat
- Guest can react to messages and AI suggestions
- Guest can view when members are typing
- Guest can navigate to stays or polls tabs

DPs:

- HMW integrate AI into group chat naturally without it dominating the conversation?

DOs:

- WHAT IF AI only responds when explicitly mentioned or when providing high-value context?

Scenario 2: Finalize & Book a Group-Decided Stay

Bella and her friends have collaborated on a shared wishlist and reached consensus on their preferred stay. Bella now proceeds to complete the booking — moving from the

finalized group decision to a confirmed reservation as quickly and effortlessly as possible.

User Goal: To transition seamlessly from the group's agreed choice to a confirmed booking — with minimal re-entry of information, zero second-guessing, and a sense of effortless completion.

Business Goal: To convert a high-intent, group-validated decision into a confirmed booking with maximum completion rate, minimum abandonment, and strong post-booking engagement.

Workflow: Variation 1 — Simple Traditional Booking

```
4.0  Wishlist (Shared)_Stays (Proceed to Book)
↓   ↘ {view stay details} → 3.0  Stay Detail (Proceed to Book) → 12.0
12.0 Booking_Reservation Info (Proceed to Pay)
↓   ↘ {apply promo code} → Pu.6  Promo Code Pop-Up (Apply) → 12.0
13.0 Booking_Payment (select method → Pay)
↓   ↘ {if payment fails} → Er.2  Payment Error Screen (Retry / Change
method) → 13.0
↓   ↘ Em.2  Booking Confirmation Email (sent to Bella)//share the receipt,
download, etc
Pu.7  Booking Confirmation (View booking / Share with group / View Booking
Reservation/ Return home)
```

Screen Type	Count
Unique Screens	4
Sub Screens	0
Pop-Ups	2
Error Screens	1
Emails / Notifications	1

Screen Details — Variation 1 (only screens not covered above)

12.0 Booking_Reservation Info

Goal: To collect and confirm reservation details before payment.

Description:

- Guest can view selected stay details including photos, dates, and pricing
- Guest can see pre-filled information from wishlist (dates, guest count, traveler names)
- Guest can review and edit check-in and check-out dates
- Guest can confirm number of guests
- Guest can enter or edit guest details (names, contact information)
- Guest can view price breakdown (nightly rate, taxes, fees, total)
- Guest can apply promo code or discount
- Guest can view cancellation policy
- Guest can add special requests or notes for host
- Guest can proceed to payment

DPs:

- HMW minimize data re-entry when information was already discussed in the wishlist?
- HMW ensure price transparency (taxes, fees) without overwhelming users?

DOs:

- WHAT IF we auto-populate all guest details from the group member list?

ROs:

- Are users booking on behalf of others comfortable entering all guest details?
- What are the friction points for users at the time of booking?

Pu.6 Promo Code Pop-Up

Goal: To allow guests to apply promotional codes or discounts to their booking.

Description:

- Guest can enter promo code
- Guest can view available promotions or credits
- Guest can see discount amount after applying code
- Guest can view updated total price with discount
- Guest can apply the promo code
- Guest can see error message if code is invalid or expired
- Guest can cancel and return to reservation info

13.0 Booking_Payment

Goal: To securely collect payment information and process the booking transaction.

Description:

- Guest can view booking summary with final total amount
- Guest can select payment method (credit card, debit card, digital wallet, bank transfer)
- Guest can enter payment card details (number, expiry, CVV)
- Guest can save payment method for future bookings
- Guest can view secure payment indicator and privacy assurance
- Guest can review terms and conditions
- Guest can complete payment and confirm booking
- Guest can navigate back to edit reservation details

DPs:

- HMW build trust in payment security for a high-value group booking transaction?
- HMW handle payment failures gracefully without losing booking momentum?
- HMW ensure price transparency (taxes, fees) without overwhelming users?

RQs:

- What are the friction points for users at the time of booking?

Er.2 Payment Error Screen

Goal: To handle payment failures and guide guests to successful transaction completion.

Description:

- Guest can view error message explaining why payment failed
- Guest can see common payment failure reasons (insufficient funds, incorrect details, bank decline)
- Guest can retry payment with same payment method
- Guest can change to different payment method
- Guest can edit payment card details
- Guest can contact support for assistance
- Guest can see reservation is held temporarily while resolving payment

Pu.7 Booking Confirmation

Goal: To confirm successful booking and provide all necessary reservation information.

Description:

- Guest can view booking confirmation message with reservation number
- Guest can see complete reservation details (stay, dates, guests, total paid)
- Guest can view host contact information
- Guest can see check-in instructions and directions
- Guest can download booking receipt
- Guest can share booking details with group members
- Guest can add reservation to calendar
- Guest can view full booking reservation details
- Guest can return to homepage
- Guest can see notification that confirmation email has been sent

DPs:

- HMW celebrate the successful group booking while providing practical next steps?

DOs:

- WHAT IF we automatically notify all group members about the confirmed booking?

Em.2 Booking Confirmation Email

Goal: To provide email confirmation with complete booking details for guest records.

Description:

- Guest receives email with booking confirmation and reservation number
- Guest can view all reservation details in email format
- Guest can access booking receipt as attachment or download link
- Guest can see host contact information and property details
- Guest can add reservation to calendar via email link
- Guest can access link to view full booking in app

Workflow: Variation 2 — Group Split-Pay Booking

```
4.0  Wishlist (Shared)_Stays (Proceed to Book)
↓   ↘ {view stay details} → 3.0  Stay Detail (Proceed to Book) → 14.0
14.0 Booking Details Screen (Enable Split Pay)//provides reservation info,

Screen Count

Screen Type	Count
Unique Screens	5
Sub Screens	1
Pop-Ups	6
Error Screens	0
Emails / Notifications	2
TOTAL SCREENS	14

Screen Details — Variation 2 (only screens not covered above)

14.0 Booking Details Screen

Goal: To provide booking details with option to enable split payment among group members.

Description:

- Guest can view complete reservation information (stay, dates, guests)
- Guest can see total booking cost and price breakdown
- Guest can view list of group members from wishlist
- Guest can enable split payment option
- Guest can choose to pay full amount individually
- Guest can view split pay benefits (fair distribution, payment tracking)
- Guest can see payment information fields
- Guest can proceed to payment setup

DP: HMW make split pay option discoverable without complicating the booking flow for those who don't need it?

DO: WHAT IF we automatically suggest split pay based on group size and total cost?

Pu.8 Split Pay Setup Screen

Goal: To configure payment distribution among group members and send payment requests.

Description:

- Guest can view total amount to be split
- Guest can see list of group members
- Guest can assign payment share amount to each member
- Guest can choose equal split or custom amounts
- Guest can view automatically calculated per-person amount for equal split
- Guest can exclude members who won't be paying
- Guest can see running total and remaining amount to assign
- Guest can set payment deadline for group members
- Guest can add custom message for payment request
- Guest can confirm and send payment requests

DP: HMW handle unequal split scenarios (some members staying extra nights) without creating confusion?

DO: WHAT IF we remember previous split arrangements from past group trips?

Pu.9 Split Pay Initiated Confirmation

Goal: To confirm payment requests have been sent and explain reservation hold status.

Description:

- Guest can view confirmation that payment requests have been sent to all members
- Guest can see reservation hold information and duration
- Guest can view payment deadline for group members
- Guest can see list of members who need to pay
- Guest can view notification that they'll be alerted when payments are received
- Guest can access booking reservation details
- Guest can share payment request information with group
- Guest can return to homepage

DP: HMW set clear expectations about hold duration without creating urgency anxiety?

15.0 Reservation Details_On Hold

Goal: To display reservation information while split payment collection is in progress.

Description:

- Guest can view reservation status as on-hold pending payment collection
- Guest can see complete reservation details (stay, dates, guests, total)
- Guest can view hold expiration date and time
- Guest can access split payment collection information
- Guest can view payment deadline
- Guest can see what happens if full payment isn't collected by deadline
- Guest can navigate to payment collection tracking view
- Guest can cancel reservation if needed

16.0 Payment Collection View

Goal: To monitor payment collection progress and manage outstanding payments.

Description:

- Guest can view payment collection progress (amount collected vs total)
- Guest can see list of all group members with payment status
- Guest can view who has paid and who hasn't
- Guest can see payment amounts for each member
- Guest can send payment reminders to members who haven't paid

- Guest can pay on behalf of member who is unable to pay
- Guest can view time remaining until payment deadline
- Guest can see real-time updates when members complete payments
- Guest can navigate back to reservation details

DP:

- HMW provide payment visibility without making it feel like pestering or shaming non-payers?
- HMW handle situations where some members can't pay without derailing the entire group booking?

DO:

- WHAT IF we send gentle automated reminders at strategic intervals instead of requiring manual nudging?

Pu.10 Payment

Goal: To allow the booking organizer to cover outstanding member payments.

Description:

- Guest can view amount being paid on behalf of member
- Guest can see which member's share is being covered
- Guest can select payment method
- Guest can enter payment details
- Guest can view updated total after this payment
- Guest can complete payment
- Guest can cancel and return to payment collection view

Pu.11 Payment Confirmation

Goal: To confirm successful payment on behalf of group member.

Description:

- Guest can view payment confirmation message
- Guest can see amount paid and member covered
- Guest can view updated payment collection progress
- Guest can return to payment collection view
- Guest can return to reservation details

DOs:

- WHAT IF we provide next steps (itinerary planning, check-in instructions, share with group)?

15.1 Reservation Details_Confirmed

Goal: To display confirmed reservation after all split payments have been collected.

Description:

- Guest can view reservation status as confirmed
- Guest can see complete reservation details
- Guest can view confirmation that all payments have been collected
- Guest can see host contact information and check-in details
- Guest can download booking receipt
- Guest can share reservation with group
- Guest can add to calendar
- Guest can view cancellation policy
- Guest can manage reservation (modify, cancel)

DOs:

- WHAT IF we provide next steps (itinerary planning, check-in instructions, share with group)?

Em.4 Payment Request Notification

Goal: To notify group members of their payment responsibility and provide a payment link.

Description:

- Member receives email/app notification about payment request
- Member can view trip details and reservation information
- Member can see their assigned payment amount
- Member can view payment deadline
- Member can access direct link to make payment
- Member can see who organized the booking

Pu.12 Notification_Reservation Confirmed

Goal: To notify the booking organizer that all payments are collected and reservation is confirmed.

Description:

- Guest receives app notification about reservation confirmation
- Guest can view notification that all group payments have been collected
- Guest can see reservation is now confirmed
- Guest can access link to view full reservation details
- Guest can see confirmation email has also been sent

RallyUp - Workflows

User: Donor (Diana)

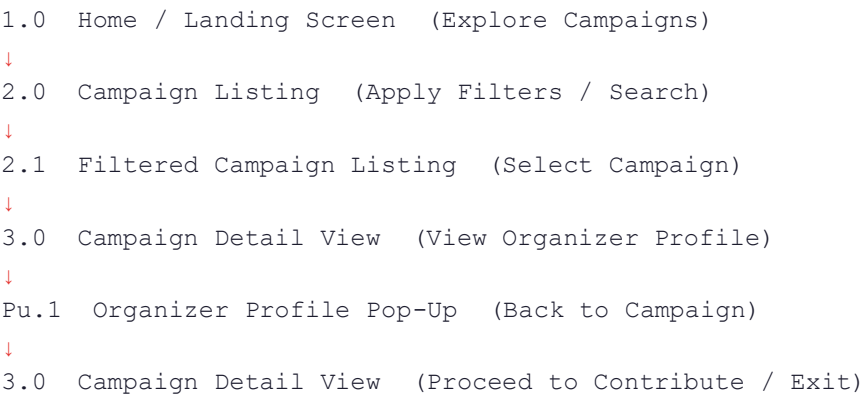

Scenario 1: Discover a Fundraising Campaign

Diana, interested in supporting social causes, comes across multiple fundraising campaigns organized by the platform and wants to explore and identify a campaign that aligns with her interests so she can contribute confidently and meaningfully.

User Goal: To easily discover, evaluate, and select a relevant fundraising campaign aligned with personal interests and trust criteria.

Business Goal: To increase donor engagement, campaign visibility, and conversion by enabling effective discovery and exploration.

Workflow: Variation 1 — Browse & Filter Driven Discovery

Screen Count

Screen Type	Count
Unique Screens	3
Sub Screens	1
Pop-Ups	1
Error Screens	0
Emails / Notifications	0
TOTAL SCREENS	5

Screen Details — Variation 1

1.0 Home / Landing Screen

Goal:

To provide an inspiring and trustworthy entry point for campaign discovery.

Description:

- Users can view RallyUp's mission, branding, and impact-driven messaging that establishes credibility and purpose
- Users can explore featured and trending campaigns curated based on platform activity or editorial selection
- Users can browse campaigns through quick-access cause categories such as Health, Education, Environment, and Community
- Users can search for campaigns directly using keywords or campaign names
- Users can navigate to the full campaign listing to explore all available campaigns
- Users can view platform-level trust indicators such as verification badges, certifications, and partner organizations
- Users can access sign-in, registration, and campaign creation entry points

DPs:

- HMW establish trust and credibility within the first interaction without overwhelming users with information?
- HMW balance emotional storytelling with actionable discovery so users feel both inspired and in control?

DOs:

- WHAT IF the homepage adapts based on entry context (referral source, time, behavior) to surface more relevant campaigns immediately?
- WHAT IF live platform activity (recent donations, campaigns gaining traction) is surfaced to reinforce momentum and trust?

RQs:

- Do users engage more with curated campaigns or category-based exploration as their first interaction?
- What combination of trust signals most effectively reduces hesitation in exploring campaigns further?

2.0 Campaign Listing

Goal:

To enable users to efficiently browse and identify relevant fundraising campaigns.

Description:

- Users can view a list of active campaigns with key information such as campaign name, category, organizer, funding progress, and time remaining
- Users can apply filters based on cause category, funding status, location, and organizer type to refine results
- Users can sort campaigns by relevance, popularity, urgency, or funding progress
- Users can search campaigns using keywords to quickly locate specific causes or initiatives
- Users can identify verified campaigns through visual indicators without opening each campaign
- Users can bookmark or save campaigns for later consideration
- Users can navigate to campaign details directly from any campaign card

DPs:

- HMW help users quickly identify trustworthy and relevant campaigns without requiring deep exploration?
- HMW present rich campaign data in a way that remains scannable and decision-friendly?

DOs:

- WHAT IF campaigns displayed a “momentum signal” (recent donation activity or growth trend) to highlight traction?
- WHAT IF subtle urgency indicators helped users prioritize campaigns nearing completion without creating pressure?

RQs:

- Which attributes most influence click-through: funding progress, cause type, or organizer credibility?
- How do users balance filtering vs sorting when narrowing down campaigns?

2.1 Campaign Listing_Filtered

Goal:

To present refined campaign results based on user-applied filters and search criteria.

Description:

- Users can view campaign results updated dynamically based on applied filters and search inputs
- Users can see active filters displayed as removable chips for easy modification
- Users can view the total number of results matching their criteria

- Users can remove individual filters or reset all filters to broaden results
- Users can handle zero-result states with guided suggestions to adjust or expand filters
- Users can save filter configurations for future exploration

DPs:

- HMW ensure users never feel stuck or blocked when filters return no results?

DOs:

- WHAT IF the system suggests adjacent or related categories when results are limited or empty?

RQs:

- What filter combinations most commonly lead to drop-offs or zero results?

3.0 Campaign Detail View

Goal:

To enable users to thoroughly evaluate a campaign and make a confident contribution decision.

Description:

- Users can view campaign overview including title, category, and visual media (images or videos)
- Users can read the campaign story to understand the purpose, beneficiaries, and urgency
- Users can track funding progress including goal amount, funds raised, donor count, and remaining time
- Users can view recent donations to understand social proof and engagement
- Users can review organizer information and navigate to detailed organizer profile
- Users can access campaign updates and supporter comments for transparency and ongoing activity
- Users can understand fund utilization through breakdowns or transparency sections
- Users can bookmark or share campaigns across platforms
- Users can proceed to contribute or exit the campaign

DPs:

- HMW enable quick trust assessment without requiring users to read through the entire campaign story?
- HMW present progress and urgency in a motivating but non-manipulative way?
- HMW balance emotional storytelling with clarity and scannability?

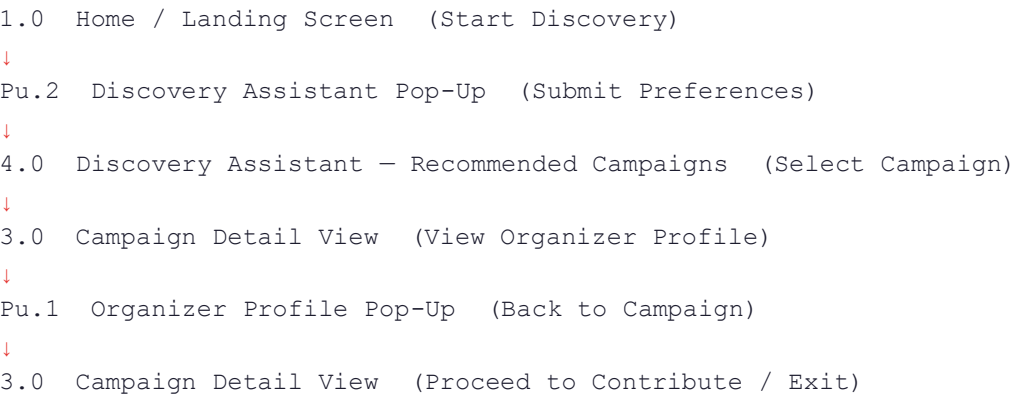

DOs:

- WHAT IF users could see a clear “impact of contribution” preview based on different amounts?
- WHAT IF returning users see updates since their last visit to reinforce engagement?

RQs:

- Which sections (story, progress, or social proof) most influence contribution decisions?
- How does visibility of updates impact perceived credibility?

Workflow: Variation 2 — Guided Discovery via Interests (System-Assisted)

Screen Count

Screen Type	Count
Unique Screens	3
Sub Screens	0
Pop-Ups	2
Error Screens	0
Emails / Notifications	0
TOTAL SCREENS	5

Screen Details — Variation 2 (only those screens not covered above)

Pu.2 Discovery Assistant

Goal:
To capture user preferences and guide personalized campaign discovery.

Description:

- Users can select preferred cause categories based on interests
- Users can indicate geographic preferences such as local, national, or global
- Users can define contribution comfort range to guide recommendations
- Users can specify campaign types such as emergency, long-term, or community initiatives
- Users can select preferred organizer types
- Users can skip optional inputs and proceed with partial preferences
- Users can submit preferences to generate recommendations

DPs:

- HMW make preference input feel intuitive and lightweight rather than effort-heavy?
- HMW balance number of inputs with personalization quality?

DOs:

- WHAT IF recommendations update dynamically as users adjust preferences?

4.0 Recommended Campaigns

Goal:

To present personalized campaign options aligned with user preferences.

Description:

- Users can view campaigns curated based on their preferences
- Users can see match explanations that indicate why each campaign is relevant
- Users can refine recommendations using filters or adjust preferences
- Users can save, dismiss, or explore campaigns further
- Users can switch to full campaign listing if needed

DPs:

- HMW ensure recommendations feel trustworthy and not overly algorithmic?

DOs:

- WHAT IF users can provide feedback (e.g., “show more like this”) to refine recommendations in real time?

RQs:

- Do personalized recommendations improve conversion compared to manual browsing?
-

Screen Details — Variation 2 (only those screens not covered above)

5.0 Impact-Led Home

Goal:

To enable users to discover campaigns by starting from the change or impact they want to create rather than browsing campaigns directly.

Description:

- Users can explore high-level impact areas, such as Food Security, Education, Health, Environment, or Community Development
- Users can view summary metrics for each impact area, such as number of active campaigns, total funds raised, and estimated number of beneficiaries
- Users can read brief impact stories or success highlights to understand real-world outcomes
- Users can compare impact areas on scale, urgency, or potential reach
- Users can select an impact area to deep-dive or opt for exploratory browsing across all areas
- Users can access tips or guidance to help choose an area aligned with their personal values or giving philosophy

DPs:

- HMW help users feel a sense of purpose immediately without overwhelming them with numbers or details?
- HMW differentiate impact areas clearly to guide user choice?

DOs:

- WHAT IF the system surfaces trending or high-need areas dynamically to guide attention without forcing choice?
- WHAT IF impact metrics use visual cues (icons, progress bars, maps) to make scale and urgency tangible?

RQs:

- Do users respond better to quantitative metrics or qualitative impact stories when selecting an area?
- How many impact areas should be shown upfront to maximize engagement without cognitive overload?

6.0 Impact Selection

Goal:

To allow users to refine focus within an impact area and start defining how they want to contribute.

Description:

- Users can explore sub-categories or specific themes within the chosen impact area (e.g., under Education: Literacy, Digital Access, STEM Education)

- Users can view short profiles of each sub-category including sample campaigns, outcomes, and key statistics
- Users can preview real-life stories of beneficiaries to connect emotionally with the cause
- Users can indicate their contribution intent, including type of donation (one-time, recurring, in-kind) and preferred focus (general support vs targeted campaign)
- Users can see the projected impact of their potential contributions within each sub-category
- Users can navigate to related sub-categories to expand their focus or refine choice
- Users can skip intent definition and browse campaigns if they prefer exploratory discovery

DPs:

- HMW make sub-category exploration feel informative but lightweight, avoiding fatigue?
- HMW help users feel confident that their choice will meaningfully contribute to impact?

DOs:

- WHAT IF suggested sub-categories are personalized based on past contributions or interest selections?
- WHAT IF contribution intent options include examples of tangible outcomes (e.g., “\$50 provides school supplies for 5 children”)?

RQs:

- Do users prefer seeing tangible outcomes before browsing campaigns or after?
- How does optional intent definition affect engagement and campaign selection?

6.1 Impact Plan Preview

Goal:

To allow users to confirm their contribution focus and preview potential impact before campaign selection.

Description:

- Users can review a summary of their selected impact area, sub-categories, and intended donation type
- Users can see visualizations of potential impact, such as number of beneficiaries, funds allocated, or social reach
- Users can adjust contribution intent (amount, type, focus) directly from the preview
- Users can see suggested campaigns aligned with the current impact plan

- Users can bookmark or save the plan for later exploration
- Users can proceed to campaign discovery with confidence that their intent is captured accurately

DPs:

- HMW give users reassurance that their choices are meaningful and actionable?
- HMW make the plan preview simple to scan but informative enough to prevent second-guessing?

DOs:

- WHAT IF users can compare multiple impact plans side-by-side to decide which aligns best with their values?
- WHAT IF dynamic indicators show how minor adjustments in donation amount change projected impact?

RQs:

- Do users engage more when the impact preview is quantified versus described qualitatively?
- How often do users adjust their plan after seeing potential impact visualizations?

7.0 Matched Campaign Results

Goal:

To present campaigns that directly match the user-defined impact intent, allowing users to act efficiently.

Description:

- Users can view a curated list of campaigns that match their selected impact area and contribution intent
- Users can see why each campaign was matched, e.g., alignment with sub-category, urgency, or beneficiary need
- Users can sort or filter matched results based on funding progress, urgency, or popularity
- Users can see estimated impact of their potential contribution per campaign
- Users can bookmark, dismiss, or explore campaigns further
- Users can adjust impact intent or expand criteria if results are limited
- Users can navigate to campaign details or back to impact plan preview without losing context

DPs:

- HMW ensure every campaign feels like a meaningful match to the user's intent?
- HMW provide transparency in matching criteria without overwhelming with technical details?

DOs:

- WHAT IF a visual cue highlights campaigns where user contribution would make the largest proportional impact?
- WHAT IF match explanations are concise but informative, building trust and alignment?

RQs:

- Does showing projected contribution impact improve click-through and donation rates?
- How does transparency in matching affect user trust and engagement?

Scenario 2: Participate in an Auction-Based Campaign

Diana, interested in interactive fundraising, wants to place bids on auction items within a campaign so she can contribute while engaging in the experience and potentially win items of interest.

User Goal: To easily discover, evaluate, and select a relevant fundraising campaign aligned with personal interests and trust criteria.

Business Goal: To increase donor engagement, campaign visibility, and conversion by enabling effective discovery and exploration.

Workflow: Variation 1 — Campaign-First Auction Discovery

```
1.0    Home / Landing Screen    (Explore Campaigns)
↓
2.0    Campaign Listing         (Select Auction Campaign)
↓
3.1    Campaign Detail View — Auction Type    (Select Item)
↓
Pu.3   Auction Item Quick View    (Place Bid)
↓ ↘ {if not logged in} → Pu.4   Login / Sign Up Pop-Up    (Authenticate)
    → Pu.3   Auction Item Quick View    (Continue Bid)
↓
Pu.5   Bid Confirmation Pop-Up    (Confirm Bid)
↓
3.2    Campaign Detail View — Auction Type, Bid Active    (View Bid Status)
```

TOTAL SCREENS	6

Screen Details — Variation 1 (only those screens not covered above)

3.1 Campaign Detail View — Auction Type

Goal: To help users understand campaign details and browse auction items to choose which to bid on.

Description:

- User can view campaign details and fundraising goal
- User can see auction timeline, start time, and end deadline
- User can view all auction items available in this campaign
- User can preview of each auction item images, what it is, current bid amounts
- User can view number of bids placed on each item
- User can see time remaining for each auction item
- User can filter items by category, price range, or ending soon
- User can select an item to view details and place bid
- User can see auction rules and bidding guidelines
- User can view organizer information

DPs:

- HMW help users identify items in their preferred bidding range quickly?
- HMW create a sense of live auction energy on the campaign page?

- HMW present multiple auction items without creating overwhelming choice or analysis paralysis?

DOs:

- WHAT IF we highlight items that match user's past interests or browsing behavior?
- WHAT IF we can analyze and predetermine using AI potential chance for winning a bid by the user?

RQs:

- Which attributes (most bid, price, category, time remaining) most influence item selection?

Pu.3 Auction Item Quick View

Goal: To provide detailed item information and enable quick bidding action.

Description:

- User can view high-quality photos of the auction item
- User can read detailed item description and specifications
- User can see estimated retail value of the item
- User can view current highest bid amount
- User can see minimum bid increment
- User can view bid history showing recent bids
- User can see countdown timer for auction end time
- User can enter custom bid amount or use quick bid suggestions
- User can view campaign information this item supports
- User can place a bid
- User can set up automatic bidding with maximum amount
- User can close the view and return to campaign

DPs:

- HMW make bidding feel accessible to auction newcomers while maintaining excitement for experienced bidders?

- HMW communicate item value and bidding strategy without overwhelming users with auction mechanics?

DOs:

- WHAT IF we show suggested bid amounts based on item popularity and typical bidding patterns?

RQs:

- Do users prefer manual bidding for control or automatic proxy bidding for convenience?

Pu.4 Login / Sign Up

Goal: To authenticate users before allowing bid placement.

Description:

- User can sign in with existing account credentials
- User can create a new account to participate in bidding
- User can sign in using social media accounts
- User can see why authentication is required for bidding
- User can view item details that prompted login
- User can proceed with authentication
- User can cancel and return to browsing without bidding

DPs:

- HMW make authentication quick enough that it doesn't break bidding momentum or cause users to abandon?

Pu.5 Bid Confirmation

Goal: To confirm bid details before final submission.

Description:

- User can view item details and photo
- User can see bid amount being placed
- User can view current highest bid for comparison
- User can see confirmation that bid meets minimum increment
- User can review auction end time
- User can view payment and shipping terms if they win
- User can edit bid amount before confirming
- User can confirm and submit bid
- User can cancel and return to item view

DPs: HMW provide necessary confirmation without creating friction that causes bid abandonment?

3.2 Campaign Detail View_Auction Type

Goal: To display an auction campaign with updated bid status after user participation.

Description:

- User can view all auction items with updated bid information
- User can see items they have bid on with visual indicator
- User can view their current bid status (winning, outbid)
- User can see bid confirmation message for recently placed bid
- User can place additional bids on other items
- User can increase bid on items where they've been outbid
- User can view notification settings for bid updates
- User can navigate to full bid activity dashboard

DP:

- HMW encourage continued engagement with other auction items without feeling pushy or overwhelming?

Workflow: Variation 2 — Item-First Discovery (Desire → Cause → Bid)

1.0 Home / Landing Screen (Explore Auction Items)

↓

```

8.0    Featured Auction Items    (Select Item)
↓
Pu.3   Auction Item Quick View

TOTAL SCREENS	7

Screen Details — Variation 2 (only those screens not covered above)

8.0 Featured Auction Items

Goal: To showcase desirable auction items across campaigns to drive item-based discovery.

Description:

- User can view curated collection of auction items from various campaigns
- User can see item photos, titles, and current bid amounts
- User can view estimated retail value for each item
- User can see time remaining for each auction
- User can filter items by category, price range, or ending soon
- User can sort by popularity, bid count, or time remaining
- User can see which campaign each item supports
- User can select an item to view details and place bid
- User can search for specific items or brands

DP:

- HMW highlight item desirability while keeping focus on the charitable cause being supported?

DO:

- WHAT IF we show the impact story behind each item to create emotional connection beyond material value?

RQ:

- Does leading with items rather than causes attract different donor segments or increase overall participation?

9.0 My Bids & Activity

Goal: To provide centralized tracking of all bidding activity and auction status.

Description:

- User can view all active bids across campaigns
- User can see current bid status (winning, outbid, won, lost)
- User can view time remaining for each auction
- User can see items they've won and next steps for payment
- User can view bid history for each item
- User can place increased bid on items where they've been outbid
- User can set up bid notifications and alerts
- User can view total amount committed across all bids
- User can access item details and campaign information
- User can filter activity by status or campaign

DP:

- HMW present bidding status clearly without creating anxiety about being outbid?

DO:

- WHAT IF we gamify the experience by showing the collective impact of all user's bids across causes?

Scenario 3: Track Donation History & Receipts

Diana, who has contributed to multiple campaigns, wants to access her donation history and download receipts so she can keep records for personal tracking or tax purposes accurately.

User Goal: To easily access past donations, view details, and download receipts for record-keeping and tax purposes.

Business Goal: To build trust and transparency while reducing support queries related to receipts and donation tracking.

Workflow: Variation 1 — Account-Centric Access

```
[1.0]Home / Landing Screen (View Account Info)
↓
[10.0]Account Information (View Donations)
↓
[11.0]Donation History Listing (Select Donation)
↓ ↘ (Search / Filter) → [11.1]Filtered Donation History
[12.0]Donation Detail View (Exit)
↓ ↘ (Download Receipt) -> Receipt Downloaded to Device
[11.0]Donation History Listing
```

Sub Screens	1
Pop-Ups	0
Error Screens	0
Emails / Notifications	0
TOTAL SCREENS	5

Screen Details — Variation 1 (only those screens not covered above)

10.0 Account Information

Goal: To provide centralized access to user account details and activity.

Description:

- User can view profile information and settings
- User can see account overview with total contributions
- User can access donation history
- User can view saved payment methods
- User can see followed campaigns and organizers
- User can access notification preferences
- User can view tax summary information
- User can manage privacy settings
- User can edit profile details

DPs:

- HMW organize account information so donation history is easily accessible without cluttering the account overview?

11.0 Donation History Listing

Goal: To display comprehensive donation history with search and filtering capabilities.

Description:

- User can view chronological list of all donations
- User can see donation date, campaign name, and amount for each entry
- User can view total donations summary by year

- User can filter donations by date range, campaign, or amount
- User can search donations by campaign name or organization
- User can sort by date, amount, or campaign name
- User can see receipt availability for each donation
- User can select a donation to view full details
- User can download multiple receipts in bulk for tax year
- User can export donation history as CSV or PDF

DPs:

- HMW present donation history, receipts in a way that's useful for tax purposes without feeling overly administrative?

DOs:

- WHAT IF we automatically generate annual giving summaries with impact metrics alongside tax documentation?

11.1 Filtered Donation History

Goal: To display donations matching user's applied filters or search criteria.

Description:

- User can view filtered list of donations based on criteria
- User can see active filters and number of results
- User can see total amount for filtered donations
- User can modify or remove filters
- User can clear all filters to return to full history
- User can select a donation to view details
- User can download receipts for filtered results

12.0 Donation Detail View

Goal: To display complete donation information and provide receipt download functionality.

Description:

- User can view complete donation details including date, time, and amount
- User can see campaign information that received the donation
- User can view payment method used
- User can see transaction ID and confirmation number

- User can view tax-deductible amount if applicable
- User can see organizer information
- User can download official tax receipt
- User can email receipt to specified address
- User can view campaign updates related to their contribution
- User can navigate back to donation history

DPs:

- HMW ensure receipt downloads are reliable and contain all necessary information for tax filing?

DOs:

- WHAT IF we show the impact achieved by this specific donation to reinforce positive feelings about giving?

Workflow: Variation 2 — Centralized Transaction Hub

```

1.0 Home / Landing (View Account Info)
↓
10.0 Account Information (View Transaction History)
↓
13.0 Transaction History (Select Donation)
↓
12.0 Donation Detail View (Download Receipt / Exit)

```

Screen Count

Screen Type	Count
Unique Screens	4
Sub Screens	0
Pop-Ups	0
Error Screens	0
Emails / Notifications	0

Screen Details — Variation 2 (only those screens not covered above)

13.0 Transaction History

Goal: To provide a unified view of all financial activities including donations, bids, refunds, and other transactions.

Description:

- User can view comprehensive list of all transactions chronologically
- User can see transaction type (donation, bid, auction win, refund)
- User can view date, amount, and status for each transaction
- User can see related campaign or item for each transaction
- User can filter transactions by type, date range, or status
- User can search transactions by campaign or item name
- User can view total activity summary (total donated, total bid, refunds received)
- User can see pending transactions requiring action
- User can select a transaction to view detailed information
- User can download receipts or documentation for specific transaction types
- User can export complete transaction history

DPs:

- HMW organize diverse transaction types in a unified view without creating confusion between donations and auction activities?

DOs:

- WHAT IF we provide visual timeline representation of giving patterns over time?

RQs:

- Do users prefer unified transaction history or separate views for donations versus auction activities?
